

ALL ABOUT YOUR

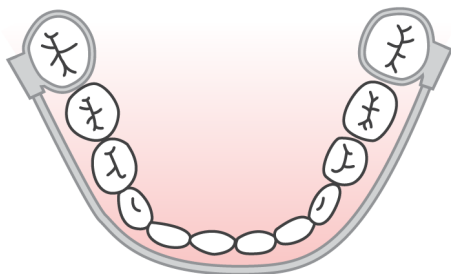

LIP BUMPER

↑↑↑
Lip pressure from talking & swallowing pushes on the lip bumper.

Lip bumper transfers pressure to the molars, pushing them back.

Space is gained to eliminate crowding. Lip bumper removes the pressure of the lips on the teeth and the alignment of the teeth spontaneously improves.

LIP BUMPER

WHAT IS A LIP BUMPER?

Your Lip Bumper is a space gainer. It will be used to move the lower molars back so that all the teeth can fit into the dental arch.

WHAT TO EXPECT

At first, the Lip Bumper will feel a little bulky to your lip. The pressure of the lower lip against the wire or plastic pad helps move the molars back. These teeth may be sensitive for the first few days.
